- The project included a backend API on NodeJS which parses mail results using Gmail API and returns related results and a frontend implemented in React that focuses on security and readability.

## SKILLS

NodeJS

Javascript

ReactJS

Go

AWS

Java

Express.js

MongoDB

HTML

CSS

MySQL

Ubuntu

## PERSONAL PROJECTS

Image Content Publishing Site (NodeJS, mongoDB, express.js, passport.js)

- After finishing my full stack web development course. Used the knowledge I gained through the course to implement a website.
- URL: [homeabove.herokuapp.com](https://homeabove.herokuapp.com)

GoTrends

- Google Trends API written in Go where you can search by keyword, country, time, property and category. Includes all the search categories in Google Trends.
- <https://github.com/sedat/goTrends>

Pokepedia

- A fully-featured Pokepedia right in your browser, add your favorite pokemons to your list so you'll always have them with you! I used React with React Hooks, React Router with authenticated routes, Firebase Auth, Firestore, Material UI.
- <https://github.com/sedat/pokepedia>
- URL: <https://zen-aryabhata-d63522.netlify.app/>

Chat-App-socket.io (NodeJS, socket.io)

- <https://github.com/sedat/Chat-App-socket.io>
- URL: <https://chatsocketappio.herokuapp.com/>

To check all the projects please visit my Github page
